

Mashkoor Patel

Junior Software Developer — ETL, Cloud & Data Integration

Bhusawal, Maharashtra, India | +91 7378517681 | patelmashkoor8@gmail.com | linkedin.com/in/mashkoorpatel

PROFESSIONAL SUMMARY

Junior Software Developer with hands-on experience in Python, SQL, backend development, REST APIs, ETL/data pipelines, and cloud-based applications. Currently working with Azure and AWS projects involving Azure Functions, Service Bus, databases, and event-driven data integration. Experienced in troubleshooting application, API, database, and data-processing issues across PostgreSQL, Snowflake, and Oracle.

EXPERIENCE

Pingahla Remote – Pune, India	Jun 2025 – Present
Jr. Software Developer	Sep 2025 – Present
Data Engineer Intern	Jun 2025 – Sep 2025
- Eliminated data-latency bottlenecks for downstream analytics on large-scale enterprise datasets, measured by consistently faster pipeline turnaround, by designing custom partition strategies and performance-tuned JDBC reads in Python and Apache Spark. - Kept AI-ready data available with zero schema-related production incidents across Snowflake, and Oracle, measured by clean structural alignment and validation pass rates, by owning schema design and NULL-mapping controls for high-availability warehouse environments. - Validated pipeline data integrity across Oracle DB source and target systems by testing at scale — from 10K to 10M+ row datasets — ensuring accurate, lossless data transfer for enterprise ETL workflows. - Improved ingestion reliability and sped up resolution of API payload and query-path issues, measured by reduced repeat pipeline failures and faster turnaround, by diagnosing root causes through structured monitoring, proactive logging, and complex SQL optimization across PostgreSQL and Snowflake. - Reduced risk of runaway or failed distributed jobs in production, measured by fewer manual interventions needed, by building automated kill-switches and fail-safe server configurations. - Cut requirement-to-delivery time on new pipeline work, measured by faster sprint turnaround, by translating business needs into scalable architecture with cross-functional teams in Jira-driven Agile sprints.	
Data Analyst Intern OxNeural Onsite – Bhusawal, India	Jun 2024 – Dec 2024
- Resolved data inconsistencies across internal relational databases, measured by improved data integrity on audit, by executing advanced SQL joins, aggregations, and subqueries for profiling and validation. - Sped up stakeholder decision-making on core business KPIs, measured by faster time-to-insight, by designing and maintaining interactive Power BI dashboards for technical and non-technical audiences.	

PROJECTS

AWS Infrastructure Project — EC2, VPC & RDS Deployment

Internship | Vinsys IT | 3 months

- Deployed and secured a web application environment on AWS EC2 within a custom VPC, configuring subnets, security groups, and inbound/outbound rules — including hands-on network access troubleshooting — to control network access.
- Provisioned an **Amazon RDS** instance as the application's backend database, managing connectivity, basic performance settings, and access through **IAM** roles and policies.
- Configured Auto Scaling and an Elastic Load Balancer in front of the EC2 fleet to maintain application availability under variable traffic, building hands-on understanding of high-availability infrastructure design.

Event-Driven Data Integration — Azure Functions & Service Bus

Pingahla | Ongoing

- Architected and built an event-driven pipeline that captures new employee records from a source HR system (Workday) on save, routing the JSON payload through Azure Service Bus via a triggered Azure Function.
- Developed a downstream function to transform and format each payload per target-database schema requirements, then load it into multiple target databases.
- Implemented error handling using a dead-letter queue (DLQ) and Log Analytics, and built a monitoring dashboard tracking triggered, passed, and failed message counts for full pipeline visibility.

Multi-Source ETL Pipeline — Advertising & Finance Connectors

Pingahla | Jun 2025 – Present

- Built end-to-end ETL pipelines pulling data from Snapchat Ads, LinkedIn Ads, and Navan into Snowflake as the central warehouse for downstream analytics.
- Engineered OAuth 2.0-based connections across Azure Data Lake, **AWS S3**, and relational databases for secure, automated multi-platform ingestion.

TECHNICAL SKILLS

AWS: EC2, VPC (Subnets, Security Groups, Inbound/Outbound Rules), Amazon RDS (PostgreSQL, MySQL, Oracle, MariaDB), S3, IAM, Auto Scaling, Elastic Load Balancing
Databases & SQL: PostgreSQL, Snowflake, Oracle, RDBMS, SQL (Complex Queries, Joins, Subqueries), Schema Design, Data Modeling, High-Availability Systems
Cloud Data Platforms: Azure Devops Pipeline, Azure Storage, Azure Service Bus, Cosmos DB, Azure SQL Database, Azure Functions
Languages & Scripting: Python (Pandas, PySpark), Java (Foundational), Unix/Linux Shell
Data Engineering: ETL/ELT Design, Apache Spark (PySpark), Data Validation, Pipeline Monitoring, Root Cause Analysis
Tools & Agile: Git, Jira (Agile/Scrum), Power BI

EDUCATION

B.Tech in Computer Engineering — KCE Society's College of Engineering & Mgmt., Jalgaon CGPA: 7.43 / 10	Aug 2021 – Jul 2024
Post Matric Diploma in Computer Engineering — Government Polytechnic, Jalgaon 84.23%	Jul 2018 – Jul 2021

CERTIFICATIONS & TRAINING

- AWS Certified Cloud Practitioner - AZ-104 (Microsoft Certified: Azure Administrator Associate) - AWS re/Start Graduate — Cloud Computing, Networking, Hands-on AWS Labs - Google Data Analytics Professional Certificate; Applied Data Science with Python – Level 2 (IBM) - Crash Course on Python; Python with Advanced AI – Skill India Digital, IIT Madras - Microsoft Learn: Azure Architecture, Identity & Access Badges
